

Proton Motor Fuel Cell GmbH (PM)

Proton Motor is a manufacturer of hydrogen fuel cells and fuel cell systems for various applications.

Fuel cell systems are considered to be a realistic and attractive alternative to conventional generation of electrical energy in the near future. Especially in the mobile sector fuel cells are a great chance to reduce fossil fuel consumption and to cut CO₂ emissions dramatically.

Based on more than 15 years of experience PM offers complete fuel cell and hybrid systems from one source, from development to implementation and production of customized solutions.

Proton Motor's focus is on "back-to-base applications" e.g. forklift trucks, city buses, light duty vehicles as well as on stationary and maritime solutions.

The product range consists of basic fuel cell systems and standard packages up to tailor-made turnkey solutions.

Proton Motor Fuel Cell GmbH is 100-percent subsidiary of Proton Power Systems plc. The company has been listed since October 2006 on the London Stock Exchange (code: PPS).
